Dalhuisen on Transnational and Comparative Commercial, Financial and Trade Law Volume 2 Jan H Dalhuisen 2022-04-07 "... remains a must read for practitioners and academics interested in more than the substantive law of trans-border commercial activity." (King's Law Journal) Volume 2 of this new edition covers the transnationalisation of dispute resolution, especially arbitration, and contains a critical analysis of the main challenges to its success, continuing credibility, and effectiveness. The volume distinguishes between commercial, financial, and foreign investment arbitration and concentrates on the status, role, and reasoning of international arbitrators, their limited powers especially in matters of public policy and in property matters, the threat of judicialisation, and the need to connect with mediation and a settlement ethos. The complete set in this magisterial work is made up of 6 volumes. Used independently, each volume allows the reader to delve into a particular topic. Alternatively, all volumes can be read together for a comprehensive overview of transnational comparative commercial, financial and trade law.

Bibliography of Microwave Optical Technology A. F. Harvey 2012-12-06 Although microwaves and coherent optics, being two of the largest and most useful branches of electrical engineering to emerge technologically, are usually considered as distinct subjects, many of the underlying fundamental principles, scientific achievements, and practical applications have common features. Following the evolution of the initial principles and techniques during the closing decade of the last century, microwave engineering has long matured to a stage of ready availability of components, automation and accuracy of measurement, economical manufacturing methods, and application of sophisticated systems. Further, this development of electromagnetic phenomena having spatial and temporal coherence has, based on several centuries of study and practice of noncoherent light, in the last two decades reached the optical region. Hence, it is now practicable to consider a comprehensive treatment of these two fields, division being made by subject matter rather than by the artificial distinctions of frequency and/or wavelength ranges. However, a full text on the combined subjects would be very large and unwieldy and, thus, this Bibliography is presented in the hope that it will prove useful as a compact reference source to a large body of workers and, by putting forward the latest scientific and technical advances, stimulate a multi-disciplinary approach. The material of the book commences with the fundamentals of radiation and matter, progressing through components and devices, amplification and generation, transmission, reception and processing of information, and methods of measurement to conclude with a wide range of applications.

EU External Relations Law Ramses A Wessel 2020-04-02 The first edition of this seminal textbook made a significant impact on the teaching of EU external relations law. This new edition retains the hallmarks of that success, while providing a fully revised and updated account of this burgeoning field. It offers a dual perspective, looking at questions from both the EU constitutional law perspective (the principles underpinning EU external action, the EU's powers, and the role of the Court of Justice of the EU); and the international law perspective (the effect of international law in the EU legal order and the position of the EU in international organisations such as the WTO). A number of key substantive policy areas are explored, including trade, security and defence, police and judicial cooperation, the environment, human rights, and development cooperation. Taking a 'text, cases and materials' approach, it allows students to gain a thorough understanding of milestones in the evolution of EU law in this area, their judicial interpretation and scholarly appraisal. Linking these pieces together through the authors' commentary and analysis ensures that students are given the necessary guidance to properly position and digest these materials. Lastly, each chapter concludes with a section entitled 'The Big Picture of EU External Relations Law', which weaves together the diverse and complex materials into a coherent whole and stimulates critical discussion of the topics covered.

Dalhuisen on Transnational Comparative, Commercial, Financial and Trade Law Volume 1 Jan H Dalhuisen 2019-07-25 This is the seventh edition of the leading work on transnational and comparative commercial, financial, and trade law, covering a wide range of complex topics in the modern law of international commerce and finance. As a guide for students and practitioners it has proven to be unrivalled. The work is divided into three volumes, each of which can be used independently or as part of the complete work. Volume 1, in the first chapter, covers the roots and foundations of private law; the different origins, structure, and orientation of civil and common law; the forces behind the emergence of a new transnational commercial and financial legal order, its meaning, concepts, and operation; the theoretical basis of the transnationalisation of the law in the professional sphere in that order; its methodology and the autonomous sources of the new law merchant or modern *lex mercatoria*, its international finance-driven impulses, and its relationship to domestic and transnational public policy and public order requirements. The second chapter covers the transnationalisation of dispute resolution in that order, especially international arbitration, and contains a critical analysis of the main challenges to its success, continuing credibility, and effectiveness. All three volumes may be purchased separately or as part of a single set.
